

NimbusCloud Drive — Product Documentation

NimbusCloud Technologies Pvt Ltd — Product Team

Document Code	PROD-DOC-014	Version	v5.0
Effective Date	10-May-2026	Owner	Director of Product

1. Product Overview

NimbusCloud Drive is a cloud-based file storage, synchronization, and collaboration platform built for teams of all sizes. It allows users to store files securely, sync them across devices, share them with fine-grained permissions, and collaborate in real time on documents, spreadsheets, and presentations.

The platform is available as a web application, desktop sync client (Windows, macOS, Linux), and mobile app (iOS, Android).

2. Pricing Plans

Plan	Price	Storage	Key Limits
Free	■0	5 GB per user	Max file size 2 GB; 3 collaborators per shared folder
Pro	■499 / user / month	1 TB per user	Max file size 20 GB; unlimited collaborators
Business	■1,499 / user / month	5 TB pooled per user (min. 3 users)	Admin console, audit logs, SSO
Enterprise	Custom pricing	Unlimited (custom quota)	Dedicated account manager, custom SLA, on-prem option

Annual billing is available on Pro, Business, and Enterprise plans at a 15% discount compared to monthly billing. All paid plans include a 14-day free trial; no credit card is required to start the trial.

3. Core Features

3.1 File Sync

Files placed in the NimbusCloud Drive folder on any connected device are automatically synced to all other connected devices and to the web application, typically within a few seconds for files under 100 MB.

3.2 Version History

Every file edit is saved as a version. Free and Pro plans retain version history for 30 days; Business and Enterprise plans retain version history for 365 days. Deleted files are recoverable from the Trash for 30 days

before permanent deletion.

3.3 Sharing & Permissions

- Viewer: can view and download but not edit.
- Commenter: can view, download, and leave comments.
- Editor: full edit access, but cannot change sharing settings.
- Owner: full control, including the ability to delete the file/folder and manage all permissions.

3.4 Admin Console (Business & Enterprise)

Administrators can manage users, enforce security policies (such as mandatory two-factor authentication and device approval), view audit logs of file access and sharing events, and configure data loss prevention (DLP) rules that block sharing of files matching sensitive patterns (e.g., credit card numbers).

4. Getting Started

- 1 Sign up at app.nimbuscloud.example using a work email address.
- 2 Download and install the desktop sync client for your operating system.
- 3 Sign in to the desktop client; a NimbusCloud Drive folder will be created on your device.
- 4 Drag and drop files into this folder to begin syncing.
- 5 Invite teammates from the web app under Settings > Members.

5. API Overview

NimbusCloud Drive exposes a REST API for programmatic access to files, folders, and sharing settings. All requests must be authenticated using an API key generated from Settings > Developer > API Keys.

Endpoint	Method	Description
/v1/files	GET	List files and folders accessible to the authenticated user
/v1/files/{id}	GET	Retrieve metadata for a specific file
/v1/files/upload	POST	Upload a new file (max 5 GB per request via API)
/v1/files/{id}/share	POST	Create or update a sharing permission on a file
/v1/files/{id}	DELETE	Move a file to Trash

The API enforces a rate limit of 1,000 requests per hour per API key. Requests beyond this limit receive an HTTP 429 response with a Retry-After header. Enterprise customers may request a higher limit through their account manager.

6. Integrations

- Slack — receive notifications and share files directly into channels.
- Microsoft Teams — preview and co-edit NimbusCloud files inside Teams.

- Zapier — connect NimbusCloud Drive events (new file, new share) to over 3,000 other apps.
- Google Workspace — open and edit Google Docs/Sheets/Slides stored in NimbusCloud Drive.

7. System Requirements

Platform	Minimum Requirement
Windows	Windows 10 (64-bit) or later, 4 GB RAM
macOS	macOS 12 (Monterey) or later
Linux	Ubuntu 20.04+ / Fedora 36+ (sync client via .deb or .rpm)
Mobile	iOS 15+ or Android 10+
Browser	Latest 2 versions of Chrome, Firefox, Edge, or Safari

8. Mobile App Features

- Offline access: mark files as 'Available Offline' to access them without an internet connection.
- Camera upload: automatically back up photos and videos taken on the device.
- Biometric lock: secure the app with Face ID, Touch ID, or Android biometric authentication, independent of the device's main lock screen.
- Document scanning: scan physical documents directly into NimbusCloud Drive as searchable PDFs (Pro plan and above).

9. Enterprise Add-Ons

Add-On	Description	Availability
Advanced DLP	Custom data-loss-prevention rules with regex pattern matching	Enterprise
eDiscovery	Legal hold and export of user content for litigation/compliance	Enterprise
Dedicated KMS	Customer-managed encryption keys (bring your own key)	Enterprise
Priority Support	Dedicated Slack channel with the support team, 1-hour SLA on all severities	Enterprise

10. Recent Release Notes

v5.0 — May 2026

- Introduced Document Scanning for mobile apps.
- Increased Business plan version history retention from 180 to 365 days.
- Added Zapier integration (replacing the deprecated IFTTT integration, which was sunset on 1 March 2026).

v4.6 — February 2026

- Added support for SAML 2.0 SSO on the Business plan (previously Enterprise-only).
- Improved large-folder listing performance by up to 40%.
